

PSN x Portage Executive Briefing Roadshow: Boston

*Empowering Public Services: Accelerating Secure Transformation
with CIAM*

Wednesday, February 19, 2025 | 11:45am - 2:00pm ET | Boston

Agenda Overview

In today's increasingly digital age, government and public sector organizations across the globe are tasked with better meeting citizens where they prefer to meet, online. Governments in the 21st century are tasked with accelerating their digital transformation efforts in a secure environment that enables them to better serve their businesses and citizens, but this is no easy task.

Building and implementing user centric approaches that better serve both customers and employees alike is critical for public sector entities that aim to foster an organization that is efficient and capable. This effort, however, often leaves government wondering, "where do we start?"

As such, Public Sector Network is proud to partner with Portage Cybertech for our in-person event, Empowering Public Services: Accelerating Secure Transformation with CIAM. At this executive engagement, we aim to highlight how public sector organizations can build a more responsible digital world that allows them to better serve the population, with a particular focus on customer identity and access management (CIAM) strategies.

Join us in Boston to better understand the balancing act of accelerating innovation and protecting critical data and access to advance digital capability within your organization! Space is limited so please reply as soon as possible.

Who You'll Meet

Leaders from the Federal, state, and local governments across US, Massachusetts and greater Boston area inclusive of those across healthcare, education with focuses on security, identity management, cyber, and digital transformation with titles including:

- Chief Security Officer
- Chief Information Security Officer
- Chief Risk Officer
- Chief Compliance Officer
- Security Manager
- Security Architect
- Security Engineer
